HIT ERP Solutions

To provide a comprehensive, advanced, and reliable ERP solution that maximizes the use of all the resources in your organization.

With our ERP solutions, you can
make dramatic performance
improvements

Overview

Most organizations have a 'Functional Structure', where each function/department works towards their own goals and objectives, rather than the organizational goals. Each of those functions/departments typically has its own computer system optimized for the particular ways that the function/department does its work.

That's what ERP solutions are for. ERP solutions integrate all departments and functions across a company into a single computer system that can serve all those different departments' particular needs, and can easily share information and communicate with each other. Also, ERP solutions integrate the information across functions, and provides a set of tools for planning and monitoring the various functions and processes and ensuring progress towards a common purpose

By forming a long-term strategic partnerships with ORACLE, one of the world's leading ERP solution providers, HIT ensures you get the most comprehensive, advanced, and reliable ERP solution possible.

HIT's ERP solutions make it easy for you to stay ahead by providing continuous data availability, unlimited scalability, and quick, non-disruptive upgrading.

Benefits

- ☑ **Ensure business continuity:** our solutions keep your mission-critical data safe and available during upgrades by mirroring it to a remote system. No information loss, no disruption, no dissatisfied customers.
- ☑ **Reduce IT load:** we can ease the intense demand on IT resources - that is required for upgrades – by having documented best practices and centralized information management, which means less hardware and easier data management.
- ☑ **Optimum ERP performance:** our solutions enable you get fast, real-time access to all of your business data, across many platforms, operating systems, and applications.
- ☑ **Unlimited growth:** our solutions allow you to grow as fast and as big as you want, without losing performance or manageability, or rebuilding your data center.
- ☑ **Constant availability**
- ☑ **Powerful partnerships:** we work closely with Oracle, one of the world's leading ERP solution providers, to ensure you get the most comprehensive, advanced, and reliable ERP solution possible.

HIT Add Value

■ Good Local Support Team

HIT have always demonstrated commitment to local market by having qualified and certified support team to serve the market needs.

■ Professional Project Management

Through the usage of ORACLE Application Implementation Methodology (AIM) and it's variations according to project size and implementation requirement.

■ Bundled Solutions with:

- **Support :-** In Association with our ORACLE Extended support service , Only HIT bundles the post implementation support with the application implementation.
- **Thick Localization Layers :-** By adding our own KCC Localization layer that include local country business rules and regulations we can minimize implementation time and thus cost as well as incorporating best practices
- **Ready Implementation Templates :-** By adding in some cases full implementation templates and a complete set of ready customized reports we can drastically minimize implementation time
