HIT Security Solutions

To provide diverse and broad security solutions designed to suit the requirements of customers in various market segments. Our solution portfolio includes:

- ID Photo Badging**
- Time Management**
- Access Control**
- Home Security**
- Digital Surveillance System**
- Information Security**

**Your Protection Is Our Main Priority,
And With Us..You Are Secured**

ID Photo Badging

Since building owners and operators today need to address the safety and security of employees and occupants, we provide an identification badging system that helps ensure the safety and security of employees and building occupants in an economical manner.

Our Photo ID Badging system provides a single data entry point for employee or visitor data to be collected in order to provide access privileges. The system requires minimal training to produce custom badges with user-defined fields. Records can be quickly updated, added or deleted, maximizing the efficiency of badge production and change.

We provide full-color, tamper-proof, high quality photo ID badges, upgrade your current ID cards, or issue them for the first time for any organization from clubs to commercial applications. Your cards will be personalized, as needed, with your company/ organization logos, photos, text, signatures and barcodes. All cards are designed to meet exactly with your requirements. They can even be incorporated into existing or new access control systems.

Complete, on-site service is available. Everything is digital! No laminating, cutting, pasting or any of the other tasks usually associated with creating ID badges. This process makes the card tamper-proof and 100% professional.

Time Management

For the recording, collection, processing and management of data relating to employee attendance, working time, presence and absence, arrivals and departures at the place of work,, we offer a fully featured and highly flexible computerized Time & Attendance Management System. It uses intelligent access control & time clock reader to collect and validate clockings, give messages and present optional reports to employees.

Whatever your requirement for time and attendance management, modest or complex, we have a high quality, proven and affordable solution.

Access Control

Whether you manage one facility or multiple sites, from entry-level, two door access control, single site, to multiple sites, our integrated access solution meets your access control needs.

Access Control allows you to manage and control outside doors as well as separate departments inside. This allows you to control access to secured areas anytime of day and you have a complete history of the access date for each area.

You don't need to learn a complicated programming language to get your access control management system up and running.

Our full line of access control systems; Coded Number Systems, Card Access Systems, Hands Free Systems, and Biometric Systems, provides you with a solution for any sized facility and budget with a maximum return on investment.

Digital Surveillance System

To help customers improve their security programs while reducing costs, we supply unique and richly featured video surveillance systems that enable a systematic supervision of indoor and outdoor sensible areas such as bank counters, in-lobby ATMs, stadiums, parking, etc.

Our systems also allow connection into remote cameras from a PC and via standard, or ISDN telephone lines, thus offering affordable long distance surveillance and control.

In addition, we offer digital video surveillance systems running on IP-based networks. The use of an IP network to transmit images and data enables authorized access to the system from any device with an Internet connection.

With digital technology, security camera products and remote video surveillance are taken to a new level, by which you can:

- Monitor your store, office, restaurant or warehouse remotely.
- Supervise employees while away from your business.
- Watch security camera activities anywhere worldwide.

Home Security

The growth in the numbers of security systems in recent years has been stunning. But security systems are required to be sophisticated in order to combat today's criminals.

We offer a wide variety of Home Security Systems to fit your home security needs and your budget. We provide a quick and easy means of security systems from intrusion alarm systems, access control systems, hard-wired systems, wireless systems, camera systems, to remote monitoring systems.

Defend your peace of mind, your well-being, and your assets with our home security systems.

Information Security

In today's uncertain times, security has come to the forefront of everyone's mind, and protecting your business has never been more important. Information is an asset to all individuals and businesses. As the numbers of websites, e-mails and electronic files increase, and the ways to access them become more flexible, the threat to your information mounts.

We provide a wide range of information security solutions and services that can be tailored for your business needs. Our product and service offerings include security management, network security, IT auditing, and ISO 17799 consulting, by which the company plays an important role in the data industry.
